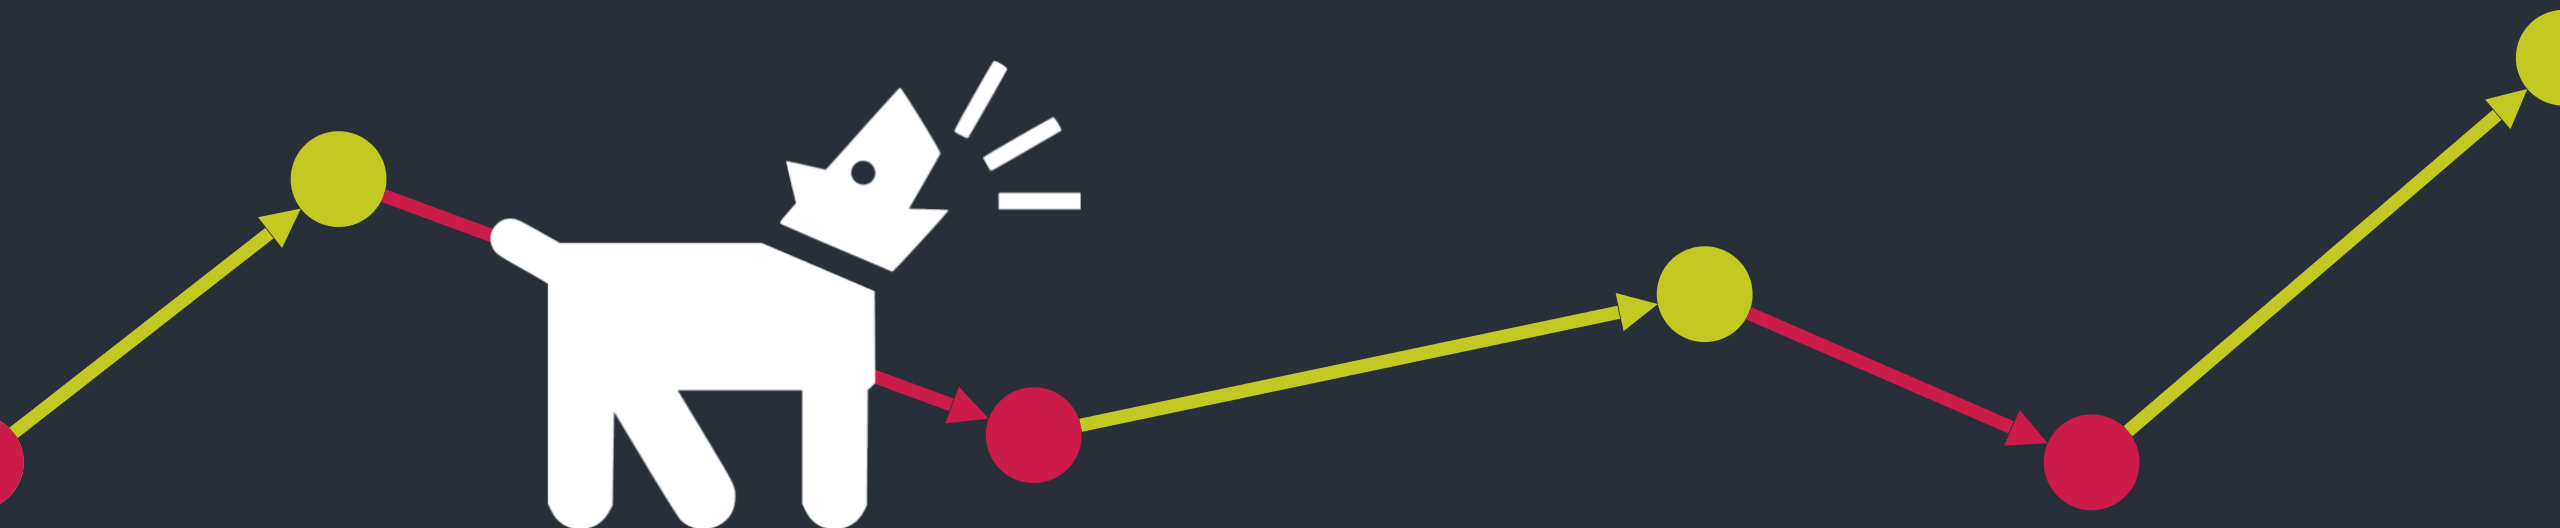
Crypto Watch Dog



Raphael Becker, Muhammad Waleed Bin Khalid

January 2021

Our Vision

„We want to create an application, which automatically notifies customers about sell and buy recommendations, based on algorithmic trade indicators“

Motivation

01 Steadily rising interest in cryptocurrencies since the creation of Bitcoin

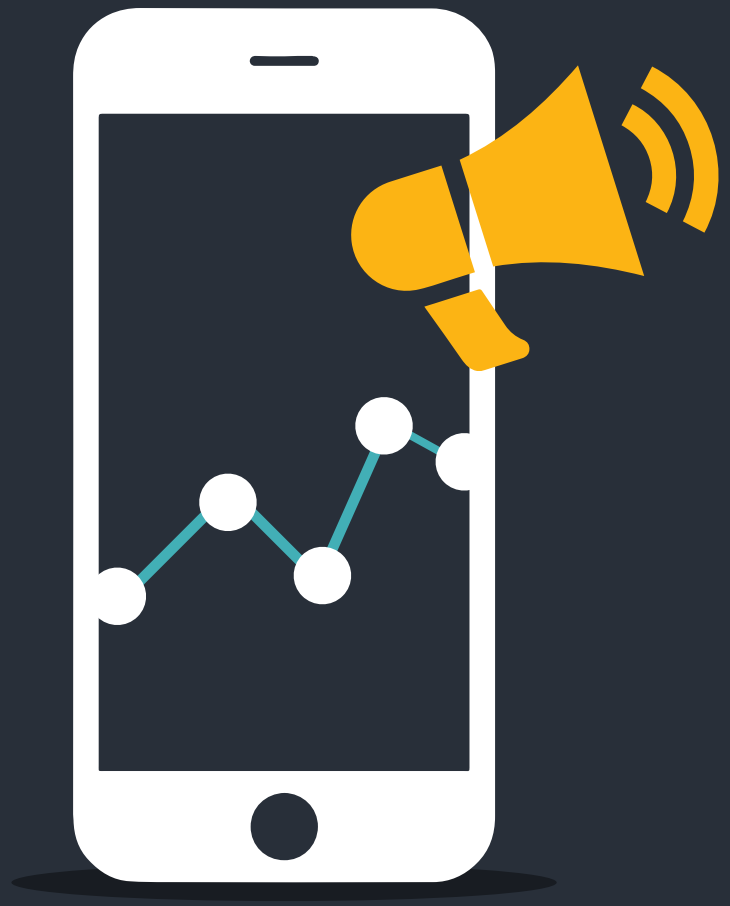
02 Eliminate emotion, save time and spares harmful stress

03 Making profitable decisions in the market, even without trading knowledge

Trade like a bot

1. Fear and Greed driven trades end up in loss and depression
2. Decouple from the volatile market, save time and keep away emotional stress
3. Get comfortable and relaxed while our crypto notification service doing the work
4. Lean back and watch your investments grow

How its done



- Subscribe to your coins of interest
- Choose your notification strategy
- Get notified, when the watchdog spots an opportunity

Our Services

- Bot
- trade indicators
- Seek coin flip
- Tax estimator
- Market entry / exit
- Portfolio rebalancing

Our Services explained

Seek coin flip: Our bot watches out for profitable trade pairs within the portfolio of the user

Market entry / exit: Our bot provides optimized entry or exit strategy advice

Portfolio rebalancing: There are coins that are considered riskier than others. Our bot notifies you when it's time to switch to the safe side

Our Services explained

Bot: This is our business logic. Its doing the work for us

Trade Indicators: We make use of well known forex trade indicators like Relative Strength Index, Moving Averages and MACD

Tax estimation: Every action on the Blockchain is considered a potentially taxable event. We notify the client of this

Project Steps

Current standing

1. UI Layer: Website, App, Telegram (Currently only Telegram group)
2. Management Layer: User data, subscriptions, http, notification (Currently only http to Telegram bot)
3. Business Logic Layer: Trade indicators, seek entry / exit, coin flip (Currently only RSI-14)
4. Database Layer: Accumulate and store data from web API
